Search, Convert, & Collaborate on Case Files in One Place

Accusoft solutions help law firms and legal departments build a more productive operation with unique technology that enables easy digital document processing. Replacing manual and labor intensive processes like redaction, our integrated content processing tools streamline collaboration and information-sharing while keeping case files and intellectual property secure.

Optimize eDiscovery Workflows

With powerful search, auto-redaction, and data capture from multiple file types, our solutions for legal applications will make your eDiscovery workflow more efficient so you can spend more time focusing on your clients.

Streamline Case Management

Simplify the way you perform case reviews by integrating data capture, file conversion, and OCR into your application. Easily tag documents with client numbers, names, and other identifying information for quick search and sorting.

Enable Greater Collaboration

Create a secure environment for information sharing with a collection of collaboration tools like markup, comparison, redaction, and approval. Remote team members, external clients, and internal employees can collaborate across multiple file types in addition to preserving unaltered versions of the original documents.

Make Smarter Decisions Faster

Process every legal document accurately, efficiently, and cost-effectively. Capture and validate information in any format while removing process latency. Modernize and automate your operations by providing internal structure and clarity so you can reach your goals for compliance, consistency, and quality control.

Integrated Solutions for Your Legal Application

Learn more about our legal application offerings.

PrizmDoc Viewer

PrizmDoc Viewer is a feature-rich document viewer used by developers to deliver seamless web and mobile viewing experiences to their users. Easy to integrate and 100% customizable, this powerful collection of REST APIs and UI Components enables developers to embed functionality like viewing, annotation, redaction, and more into their applications.

PrizmDoc Editor

PrizmDoc Editor is a secure document editor used by developers to deliver in-browser document creation and editing functionality to their users. With white-label capabilities and a customizable interface, this powerful document editor easily integrates with collaboration platforms such as CRM, CMS, and more for a seamless user experience.

OnTask

OnTask is a document automation platform, backed by over 20 years of Accusoft's document imaging expertise. Our powerful and flexible platform helps you standardize processes, reduce risk, and ultimately increase your team's productivity. Unlock your data, automate approval and signing processes, and streamline your workflows.

ImageGear

ImageGear is a developer toolkit that easily integrates into virtually any application. It helps end-users view, edit, and search different types of files like images, documents, and PDFs. In addition, it offers powerful OCR, compression, conversion, and scanning for 100 different file types including .JPG, CAD, TIFF, PDF, DICOM, and more.

Discover a better way to manage your caseloads and automate document processes with our content processing tools. **For more information on our legal solutions, contact us at** sales@accusoft.com.
