APIs & SDKs for InsurTech Solutions

Integrate streamlined, collaborative document viewing, collaboration, and processing into your insurance software.

The Challenge

Insurance technology is changing rapidly as more clients are seeking to streamline collaboration on bundled policies, certificate of insurance documents, and declaration pages. Insurance professionals are tasked with sorting through data in all shapes and sizes. With 90% of the world's data generated from 2018-2020 alone, insurance agencies are tasked with making data-driven decisions to remain competitive in an incessantly changing marketplace. Often times, this data collection or access includes personally identifiable information (PII) that must be secured for client privacy. In the current state of the world, InsurTech is under more pressure than ever to automate processes for end-users. While many use an InsurTech solution to streamline processes, some insurance professionals are still using email and third-party document processing software to collaborate with actuaries, underwriters, and internal stakeholders alike.

The Solution

APIs and SDKs are efficient tools that provide innovative functionality to developers and product engineers. With solutions that specialize in document viewing and editing, form processing, data capture, search, and more, InsurTech solutions can enhance evolving applications with essential document management foundations. Transforming manual processes into automated, digital solutions can save time and cut costs. With these integrations, insuretech developers can streamline their sprint work and focus on valuable projects, without spending time and energy to maintain these core foundations on their own.

Key Benefits

Collaborate on Policy Bundles
By integrating a versatile, web-based HTML5 viewer, InsurTech companies can empower users to view, annotate, and redact over 100 different file types from a browser window.

Recognize Forms & Capture Data
Using advanced form processing with standard form recognition and data capture, InsurTech companies can streamline data capture with confidence.

Evaluate Risk with Actuaries
Enable your application to import, edit, and export XLSX without dependencies on Excel, and separate proprietary business logic, formulas, and calculations from your user interface.

Share Information with Underwriters
Collaborate securely with internal and external stakeholders by converting emails, texts, Word documents, images, and more into a consolidated PDF within your application.

Automate Critical Contract Processes
Keep contract content consistent and controlled and automate repeatable parts of contract generation without compromising security.

Key Products

prizmdoc

Streamline collaboration efforts and deliver secure document processing capabilities with annotation, redaction, document assembly and automation, user access, version control, eSignature, and more under a single, customizable framework to ensure easy claim and policy processing.

imagegear

Enhance your application with image processing for all file types. Clean up images, process through ImageGear's OCR engine, and provide your employees searchable files in a standardized format. Give your users the tools they need to process insurance documents efficiently with underwriters and claims adjusters.
