We Make LegalTech Better

Accusoft's viewing, document assembly, and data capture technology helps LegalTech developers take their applications to another level.

The Challenge

Legal firms need better solutions to meet the growing demands of their clients. Without flexible case management tools that help them improve speed, productivity, and efficiency, they run the risk of falling behind in an increasingly competitive market. It falls to LegalTech developers to build feature-rich applications that streamline document lifecycles and automate core legal processes. These developers must strike a balance between innovation and functionality without overextending their resources or compromising development timelines. To meet the legal industry's needs, they need powerful tools that allow them to quickly integrate the essential case management and document processing capabilities that will make their solutions even better.

The Solution

Accusoft's groundbreaking technology has been making document viewing and processing better throughout the legal industry for over 30 years. We bring together powerful HTML5 viewing, file conversion, document assembly, and data capture capabilities to help LegalTech developers build innovative platforms that streamline eDiscovery and case management for the legal industry. Stop spending valuable time creating document viewing and processing features from scratch and start devoting your valuable resources toward making your applications better. Whether you're leveraging PrizmDoc to integrate HTML5 viewing, editing, annotations, redactions, and assembly into your platform or integrating ImageGear to enhance your document lifecycle, the Accusoft team is here to provide the precision and attention to detail the legal industry demands.

"Accusoft was there for us. We figured out how to address problems with each other, and it makes both of us better. I feel Accusoft is 100% invested in us as a client and a partner."

— Stefanie Zukowski, *Director of Operations at LegalSifter*

Key Benefits

Document Assembly

Automate key contract creation steps to streamline document workflows, minimize human error, and eliminate version confusion.

File Viewing and Conversion

Open and convert 100+ file types into a singular format that can be viewed from a centralized location for streamlined eDiscovery.

Video Support

View multiple video file formats directly in the browser without having to leave the viewer interface or rely on external tools.

Document Annotation and Redaction

Redline content with a variety of annotation tools and redact key pieces of information from confidential documents during eDiscovery.

Comprehensive Data Capture

Quickly extract information from scanned images using OCR to create searchable text documents for easy research and reference.
