# PrizmDoc®: Streamlining Manual Document Processing with AI-Powered Technology for Enterprise Content Management (ECM) Organizations

PrizmDoc provides AI-powered technologies leveraging IBM watsonx.ai specifically designed to optimize your ECM, including:
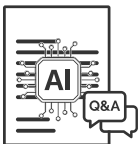

Auto Summarization:

Present users with concise overviews, allowing them to quickly understand key points without reading full documents. The summarization produces consistent, standardized document summaries, minimizing the variability inherent in human-generated summaries. This ensures that all users receive uniformly high-quality information.
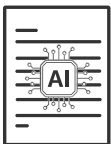

Auto Tagging and Classification:

Leverage IBM's watsonx.ai to analyze content and automatically organize documents into customer-defined categories and tags. This indexing saves time by removing manual work while improving searchability. Documents are consistently organized, enabling efficient retrieval.

Document Q&A:

Enable precise answers directly from documents in response to users' questions, reducing time spent reviewing and collaborating on documents for users. ECM users can leverage a chat interface to pose detailed questions and receive precise, contextually relevant answers. This capability drastically reduces the time and effort needed to review documents for relevant content or context.

Personally Identifiable Information (PII) Detection and Redaction:

This feature assists users by detecting and highlighting PII for review. Users can review the results in context and easily redact information with the click of a button. Additionally, PrizmDoc allows users to set up the PII Detection and Redaction tool to automatically redact sensitive information, eliminating the need for manual review.

By harnessing the power of IBM watsonx.ai within PrizmDoc, customers can streamline document management processes, boost productivity, and enhance data security within their tailored software solutions, ultimately transforming document management and processing experiences.

AI-Powered PrizmDoc Benefits

Boost Efficiency and Save Time

Enhance ECM user productivity and satisfaction with powerful tools that streamline document processing and create a seamless user experience.

Automated Compliance and Risk Management

Empower users with tools to ensure compliance with data protection by leveraging PrizmDoc's ability to identify and highlight sensitive information automatically.

Improve Consistency and Collaboration

In collaborative work environments, team members must review and discuss numerous documents. PrizmDoc ensures all team members are on the same page with standardized tags, classifications, and summaries without needing to read through lengthy documents individually.

Seamless Integration and Customization

PrizmDoc's AI-powered tools leveraging IBM watsonx.ai seamlessly integrate into existing ECM applications, providing users with powerful document processing tools without needing to leave the system. This keeps documents secure within your ECM, ensuring robust document security and enhanced efficiency and performance.

PrizmDoc by Accusoft: Offering AI-powered technology leveraging IBM watsonx.ai

PrizmDoc leverages cutting-edge AI to tackle critical challenges that ECM systems and users face. Our solutions eliminate manual inefficiencies in tagging, classifying, and reviewing large volumes of documents, ensuring accuracy and scalability. ECM users benefit from streamlined experiences, ultimately saving time and reducing costs.
