Take Control of Your App with Configurable Technologies for Solving Complex Document Challenges

The Challenge

Today's developers are tasked with building more sophisticated features for their enterprise content management (ECM) software. Their users demand robust document viewing and processing capabilities.

Building these features from the ground up takes significant development time, and teams often lack the in-house resources to deliver. Developers want the flexibility to tailor features to fit their users' needs and integrate them seamlessly into their applications. They need tools that allow them to quickly customize features for their software solutions from within their existing framework.

The Solution

Accusoft develops configurable API and SDK technology that works behind the scenes in customized applications to help developers solve the most complex document lifecycle challenges.

Add sophisticated document-handling capabilities to your application without having to build these complex features from scratch.

Our SDK technologies include:

PDF support
Image viewing and manipulation
OCR/ICR
Office support
Barcode processing

> " One of the reasons that Accusoft stood out from the crowd is its comprehensiveness. The products are easily customizable, but also work together. We're definitely getting our money's worth with PrizmDoc Viewer and ImageGear. Together, these two integrations fit our needs perfectly. "

Tools Made by Developers, For Developers

imagegear

Create, control, and deliver secure, high-quality image processing in your application.

Features:
• Image processing
• OCR
• File format control
• Image compression and conversion
• PDF processing

Target Frameworks: .NET, .NET Core
Supported OS: Windows and Linux

rastermaster

Leverage powerful imaging and conversion capabilities in your application.

Features:
• Annotation
• Text extraction
• Watermarks
• Printing and saving
• Twain scanning

Target Frameworks: Java
Supported OS: Windows, macOS, Linux

BarcodeXpress

Easily integrate a fast and accurate barcode SDK into your desktop or web application.

Features:
• Reads and detects 30+ barcode types
• Accurately locates and decodes multiple barcodes including damaged, broken, and incorrect barcodes
• Works with 24-bit color images, 8-bit grayscale images, and 1-bit black-and-white images Target

Frameworks: .NET
Supported OS: Windows, Linux

FormSuite for STRUCTURED FORMS

Build your feature-rich forms processing application quickly and easily.

Features:
• Form cleanup
• Optical character recognition (OCR)
• Intelligent character recognition (ICR)
• Form identification
• Optical mark recognition (OMR)
• Signature verification

Target Frameworks: .NET
Supported OS: Windows

SmartZone

Eliminate manual data entry with automated zonal data capture technology in your application.

Features:
• Optical character recognition (OCR)
• Intelligent character recognition (ICR)
• Adjustable confidence values
• Extensive OCR language support
• Zonal field recognition
• Full page recognition

Target Frameworks: .NET, .NET Core
Supported OS: Windows, Linux

> "We initially looked at a few viewers. Some were freeware, which needed a lot of development time to get up with no promise of success. Other paid solutions did not have the flexibility we wanted. We wanted a full viewing platform with backend conversion and integration ability without months of development time."

Why Accusoft

Cross-Platform Compatibility
Choose the tool that's most suitable for your tech stack.

Dedicated Technical Support
Integrate our tools into your existing application and get responsive support when you need it.

Innovation First
Our technology is backed by groundbreaking patents that allow us to provide unique software integrations that expand the capabilities of your applications.

Ready to bring new document processing features to market faster?
