

Powering the eDiscovery Process for Legal Tech Software Applications

Accusoft's software integrations for secure document viewing and processing tools for eDiscovery help Legal Tech Independent Software Vendors (ISVs) take their applications to the next level.

We partner with Legal Tech ISVs to deliver features that address the rising costs that law firms are experiencing with the eDiscovery process today, including:

- Increased volumes and diversity of file types
- Protecting document metadata while providing review and mark-up tools to prepare cases
- Identification and protection of PII data
- AI-assisted eDiscovery tools

The Solution: PrizmDoc® by Accusoft

PrizmDoc simplifies document viewing and processing, making it both efficient and cost-effective. Instead of investing precious time in developing these features from scratch, redirect your valuable resources toward enhancing your applications. Our comprehensive solution includes robust web-based viewing, annotation, redaction, AI-assisted PII identification, file conversion, and data capture capabilities. These tools empower Legal Tech ISVs to create innovative platforms that streamline eDiscovery and case management within the legal industry.

“At ArkCase, we look to integrate best-of-breed products in order to streamline customer's processes. PrizmDoc was a clear choice for our platform due to its seamless integration and robust document viewing capabilities.”

- Ray Azarm
VP Enterprise Practice,
ArkCase

PrizmDoc Benefits

Accelerated Development

Quickly integrate sought-after document processing features into your software.

Reduced Cost

Save expenses by adopting a proven API-based solution for document viewing and processing.

Improved Security

Ensure compliance and minimize risks by keeping sensitive documents within your secure application environment.

Consistent User Experience

Maintain a cohesive and efficient user experience across your branded applications.

PrizmDoc Features

Viewing

Support for over 100+ file types

Annotation

Tools to support the review process

PII Detection and Redaction

AI-driven tools to mitigate risks

Comprehensive Data Capture

OCR to create searchable text

Video Support

View video files in your application

“We initially looked at a few viewers. Some were freeware, which needed a lot of development time to get up with no promise of success. Other paid solutions did not have the flexibility we wanted. We wanted a full viewing platform with backend conversion and integration ability without months of development time.”
