

Turn Your Application into a Document Management Powerhouse with Flexible Document Viewing and Processing

Challenge

Independent Software Vendors (ISVs) building or maintaining Enterprise Content Management (ECM) software face document control challenges without in-application viewing solutions. Users resort to downloading documents from the ECM to external applications for viewing and processing, creating inefficiencies and security risks. To address this, users need the ability to open and process documents directly within the ECM application. However, building and supporting a document viewing solution in-house entails significant challenges and costs, including maintaining libraries for various file formats and developing essential features like annotation and search, diverting valuable resources from core application development.

Solution

PrizmDoc®'s API-based document viewing and processing capabilities integrate seamlessly into any web application, allowing developers to incorporate secure document management and lifecycle functionality into their software. Fully customizable and white-label ready, PrizmDoc allows users to open, view, and mark up multiple file formats within your application, improving efficiency and performance. PrizmDoc is easily customizable, allowing developers to expose or hide capabilities related to document security in the UI, such as printing or downloading. Additionally, the key features such as search, annotation, and redaction can also be easily turned on/off. Our white-label services allow you to brand, customize, and control the viewer depending on your application's needs. With PrizmDoc embedded in your application, you are able to provide a secure viewing experience for your users and maintain control of your documents.

“The biggest problem our engineering team faces every day is deciding on whether to prioritize core technology over the enhancement requests of our customers. By using Accusoft, we can focus on our customers instead of backend components.”

- Brad Porter
CTO,
KnowledgeLake

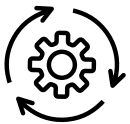

PrizmDoc Features

- Viewing
- Annotation
- Redaction
- PII Detection and Redaction
- Conversion
- Support for Java

“ I work with PrizmDoc Viewer on a day-to-day and week-to-week basis. It's easy to implement, and it saved us time and effort from a development standpoint. The fact that it's HTML5 was a big thing for us and the public documentation is very, very strong. A lot of companies say they will do it, but Accusoft has the code snippets and demos to prove it. ”

- Brad Hickey
Head of Engineering,
TEAM Informatics

PrizmDoc Benefits

Accelerated Development

Quickly integrate advanced document processing features into your software.

Lower Cost

Save expenses by adopting a proven API-based solution for document viewing.

Improved Security

Ensure compliance and minimize risks by keeping sensitive documents within your secure application environment.

Consistent User Experience

Maintain a cohesive and efficient user experience across your branded applications.

Deploy PrizmDoc Your Way

Depending on your infrastructure needs, PrizmDoc is available via three deployment options:

- *Self-Hosted*
- *Private Cloud-Hosted*
- *Cloud-Hosted*
